LOXCREEN OFFERS ACID ETCH ANODIZING

Loxcreen has moved to an acid etch anodizing process. The major benefits of acid etch versus caustic etch is improved finish, better color consistency from batch to batch, and reduction of waste by-product (sludge) into landfills.

Benefits of Acid Etch:

- Reduces or eliminates die lines and surface defects.
- Provided a superior matte finish.
- Better color consistency.
- Reduced etch time in tank.
- Reduced amount of metal lost in anodizing process.
- Meets AAMA 611 specification.
- Environmentally friendly – reduces sludge up to 90%.
