

Lawn Edging

Commercial

This product is designed for the contractor, landscape professional or homeowner who needs a heavy-duty edging. Our commercial 4.5" landscape edging is made from high quality post-industrial material that gives it excellent flexibility and performance. Perfect for borders, pathways or mulched beds. Is easily installed and comes with connectors to create appealing long graceful curves.

Features:

- 4.5" height
- One connector per strip
- Durable recycled MDPE
- Easy to install
- Optional stakes sold separately
- Color: Black
- Lengths: 20', 40', 60' coils

Easy Installation

1. Loosen roll and lay edging in straight line (on concrete or pavement—not on grass). Secure each end with weight to hold in place. *See note.
2. Use a garden hose or rope to create your design.
3. Dig a V-shaped trench 4" to 5" deep.
4. Insert edging in trench and drive stakes diagonally every 4 to 5 feet.
5. Refill trench with dirt, leaving top edge exposed.

**Note: If temperature is below 65 degrees (Fahrenheit), the edging needs to be exposed to sun for 2 days, between 65–75 degrees for 8 hours, and over 75 degrees for 3 to 4 hours. Installation will be much more successful if these suggestions are followed. If coil is not allowed to relax and straighten, the edging may not stay in the ground.*
